SIMATS ENGINEERING
ASSESSMENT TOOL 4

COURSE NAME: **Artificial Intelligence** **COURSE CODE:** **CSA17**
SARANYA.R.A
192572052

COURSE OUTCOME COVERED

CO2: *Experiment search and game-solving techniques such as Greedy Search, A*, CSP, Minimax, and Alpha-Beta pruning with heuristic functions for solving complex AI problems efficiently. (BL3)*

Assessment Tool Weightage: 10%

Duration : 30 Minutes

QUESTIONS: 20 **Total Marks:20**

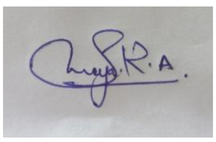
Annexure A

MCQ Test

Code of Conduct:

I Saranya.R.A (192572052) certify that this submission is my original work and that I have adhered to the guidelines specified for this assessment.
I understand that any violation of academic integrity rules will result in disciplinary action.

Signature of the student:



CSA17- Artificial Intelligence

Total points 44/50

Unit Test 1 (28/07/2026)

The respondent's email (**192572052.simats@saveetha.com**) was recorded on submission of this form.

Which of the following best describes the role of sensing in online search with partial information? *2/2

- ( ) It eliminates the need for a transition model.
- (•) It allows the agent to update its belief state after taking an action
- ( ) It can optimize the solution cost in fully observable and dynamic environments.
- ( ) It improves the branching factor of the search tree.

Which of the following is true about Uniform Cost Search (UCS) when all step costs are equal? *2/2

- ( ) It becomes a Best-First Search using depth as heuristic
